

Re-Ocurring Garden Bed Maintenance

We are pleased to keep the garden beds of our customers manicured and maintained year round. Our objective in providing this service is to keep up with the important maintenance required for your garden beds. When bushes are trimmed regularly, they tend to be healthier and allow for new growth that thickens the plant material. Weeds that are kept up with don't get out of control. Unmaintained garden bed edges grow back in with the mulch and require excess material to be hauled away when re-edging.

When garden beds are left neglected several months throughout the year, problems arise that make the next day working on them much more of a choir and, most of the time, require a larger project than necessary to get them back in shape. Alternatively, we can offer an affordable monthly or bi-monthly service to take care of all the maintenance required. Our standard services provided for each visit include: (These will need to be customized based on your property's specific needs)

- **Pulling larger weeds by hand & spraying others.**
- **Bush trimming (Some bushes may not be trimmed each visit due to blooming windows)**
- **Removing adventitious shoots (suckers from base of trees)**
- **Re-edging garden beds and/or defining line outside brick border.**
- **Trim larger trees to maintain 3.5ft distance from house**
-Offered on a monthly or bi-monthly visit schedule.

*We will customize the quote to your property, but you can use these services as a benchmark. Check quote description for any additional information. Many times a property requires more of less of the items listed. (ie. add "re-align brick border in backyard" to quote, add "rake up pine needles" to quote, or remove "trim larger trees" from quote) Mulching is performed as a separate project in the spring.
